		COSA basic indicators of COSitA
Farm Informati	ion Set	NB: some indicators have specific methodologial approaches and these are adapted to specific country-sector needs in order to maintain global consistency of the comparable indicators
Core Issue	Macro	Indicator Fields
Vital Statistics	Household Demographics	Producer age
		Producer education
		Producer experience Producer gender
		Household revenue & assets
		Household composition
	Farm Characteristics	Land tenure
		Farm management
		Farm size Farm location
		Distance to market
<b>Economic Sus</b>	tainability	
Core Issue	Macro	Indicator Fields
	Revenue	Farm revenue
		Target crop revenue
		- Yield
		- Price Household labor revenue
		Total production costs for target crop
	Costs	- Labor costs
Producer		- Fertilizer costs (synthetic and natural)
Livelihood		- Biocide costs (synthetic and natural)
Liveilliou		- Equipment costs
		- Energy costs Certification costs (direct)
		Compliance costs (indirect) to meet Standards
		- Specific training
		- Specific infrastructure
		- Record keeping (e.g. traceability)
	Income	Producer net income from target crop
	Diversification	Portion of total production revenue from target crop  Portion of cultivated farm area used for other crops
		Access to market information
Risk	Information	Price formation - Producers understanding the factors (e.g. quality, certification, point of delivery, market price) that affect the
		price paid by buyer or producer org.
	Credit	Access to credit (how much and from what sources)
	Volatility	Price volatility
	Vulnerability	Yield volatility  Access to medical services
		Relationship to National Poverty Line
		Days without sufficient food
		Discrimination - compare pay (gender or diverse ethnicity or affiliation) for same role
	Business Development	Access to market information
		Ratio of farm price to global reference price
		Training attended - Type
		- Amount of time
		Price formation - Producers understanding the factors (e.g. quality, certification, point of delivery, market price) that affect the
<u>γ</u>		price paid by buyer or producer org.
Competiveness	Differentiation	Quality practices in cultivation and processing  Producers knowing quality levels
tive		Ownership or control of certification or standard
pe		Number of current standards or certifications
Ķ		Amount of price premium for complying to a standard or certification
, and the second		Portion of crop sold as compliant or certified
	Efficiency	Labor efficiency Wealth phage ever time
		Wealth change over time Productivity - efficiencies of output/inputs
		- Labor use (time & cost)
		- Agrochemical use (volume & cost)
		- Energy use (\$)
	Governance	Producer participation levels in groups
		Democratic process in organization (vote)  Women's participation with local producer groups
Producer	Services	Number of basic services provided by assn. i.e. marketing, inputs, extension, storage, credit, market information, processing
Organization		
Organization	Services	etc
Organization	Services	etc  Community relations - farms participating in projects (i.e. infrastructure)
Organization Perception	Services Producer Perception	

1

Core Issue	nability	
	Macro	Indicator Fields
Labor Condtions	Health and Safety	Restricted agrochemical use for vulnerable groups
		- Children
		- Pregnant women
		Farms w/protective gear (agrochemical application)
		Farm injuries  Access to Medical Services
		- Time to reach
		- Cost
	Living Conditions	Smoke ventilation in cooking area
		Farms w/safe water for domestic use
Basic Human	Labor Rights	Children working - Children in school at appropriate grade level
		Workers and smallholders earn at least minimum wage or national poverty line
		Discrimination (worker)
		Training attended
		- Type
	Education	- Cost to producer
Rights and Equity		- Amount of time Children in school at appropriate grade level
	Gender	Women's participation with local producer groups
		Farms with women as head of farm
		Women serving as a community-level delegate or committee member
		Women holding a leadership post in the producer group
		Access to training for women
	Food Security	Access to education by gender  Days without sufficient food
	Food Security	Community relations - farms participating in projects (infrastructure)
	Participation	Producer participation levels in groups
Community		Democratic process in organization (vote)
		Women's participation with local producer groups
		Buyer (or co-op) provided financial or management support
	Transparency	Access to market information  Price formation - Producers understanding the factors (e.g. quality, certification, point of delivery, market price) that affect the
Shared Value		price paid by buyer or producer org.
	Investing in Capacity	Training attended
Perception	Producer Perception	Producer perceptions of changed social issues:
		- Community relations
rerespiton		- Community care of the environment
		- Quality of life
<b>Environmenta</b>	I Suctainability

Core Issue	Macro	Indicator Fields
	Macro	
		Indicator Fields  Water conservation measures Access to safe water
	Macro Conservation	Water conservation measures Access to safe water Contamination
Core Issue	Macro	Water conservation measures  Access to safe water  Contamination  - Water contamination prevention measures
Core Issue	Macro Conservation	Water conservation measures Access to safe water Contamination - Water contamination prevention measures - Water discharge control
Core Issue	Macro Conservation	Water conservation measures Access to safe water Contamination - Water contamination prevention measures - Water discharge control Farms recycling - reusing waste
Core Issue Water	Macro  Conservation  Quality	Water conservation measures Access to safe water Contamination - Water contamination prevention measures - Water discharge control Farms recycling - reusing waste Water contamination prevention measures
Water Resource	Conservation Quality  Waste Management	Water conservation measures  Access to safe water Contamination - Water contamination prevention measures - Water discharge control Farms recycling - reusing waste Water contamination prevention measures Amount of biocides used (synthetic & natural)
Core Issue Water	Macro  Conservation  Quality	Water conservation measures  Access to safe water  Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency
Water Resource	Conservation Quality  Waste Management	Water conservation measures  Access to safe water  Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency  Energy quality and use (gas, wood and other sources
Water  Resource Management	Conservation Quality  Waste Management Input Management	Water conservation measures  Access to safe water  Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency  Energy quality and use (gas, wood and other sources  Level of erosion on farms
Water Resource	Conservation Quality  Waste Management	Water conservation measures  Access to safe water Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency  Energy quality and use (gas, wood and other sources  Level of erosion on farms  Soil conservation measures
Water  Resource Management	Conservation Quality  Waste Management Input Management Soil Health	Water conservation measures  Access to safe water Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency  Energy quality and use (gas, wood and other sources  Level of erosion on farms  Soil conservation measures  Local (closed) nutrient cycle of organic matter & crop processing left overs
Water  Resource Management  Soil	Conservation Quality  Waste Management Input Management	Water conservation measures  Access to safe water Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency  Energy quality and use (gas, wood and other sources  Level of erosion on farms  Soil conservation measures
Water  Resource Management	Conservation Quality Waste Management Input Management Soil Health Flora Diversity	Water conservation measures  Access to safe water Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency  Energy quality and use (gas, wood and other sources  Level of erosion on farms  Soil conservation measures  Local (closed) nutrient cycle of organic matter & crop processing left overs  Overstory biodiversity  Managed conservation areas  Overstory trees per hectare
Water  Resource Management  Soil	Conservation Quality  Waste Management Input Management Soil Health	Water conservation measures  Access to safe water Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency  Energy quality and use (gas, wood and other sources  Level of erosion on farms  Soil conservation measures  Local (closed) nutrient cycle of organic matter & crop processing left overs  Overstory biodiversity  Managed conservation areas  Overstory trees per hectare  Reforestation
Water  Resource Management  Soil  Biodiversity	Conservation Quality  Waste Management Input Management Soil Health Flora Diversity Flora Density	Water conservation measures  Access to safe water Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency  Energy quality and use (gas, wood and other sources  Level of erosion on farms  Soil conservation measures  Local (closed) nutrient cycle of organic matter & crop processing left overs  Overstory biodiversity  Managed conservation areas  Overstory trees per hectare  Reforestation  Carbon Sequestration proxy: Overstory or Forest quantity/quality
Water  Resource Management  Soil	Conservation Quality Waste Management Input Management Soil Health Flora Diversity	Water conservation measures  Access to safe water  Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency  Energy quality and use (gas, wood and other sources  Level of erosion on farms  Soil conservation measures  Local (closed) nutrient cycle of organic matter & crop processing left overs  Overstory biodiversity  Managed conservation areas  Overstory trees per hectare  Reforestation  Carbon Sequestration proxy: Overstory or Forest quantity/quality  Emissions proxy: Energy & Nitrogen calculation
Water  Resource Management  Soil  Biodiversity	Conservation Quality  Waste Management Input Management Soil Health Flora Diversity Flora Density Sequestration and	Water conservation measures  Access to safe water  Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency  Energy quality and use (gas, wood and other sources  Level of erosion on farms  Soil conservation measures  Local (closed) nutrient cycle of organic matter & crop processing left overs  Overstory biodiversity  Managed conservation areas  Overstory trees per hectare  Reforestation  Carbon Sequestration proxy: Overstory or Forest quantity/quality  Emissions proxy: Energy & Nitrogen calculation  Conversion of natural areas to farm land
Water  Resource Management  Soil  Biodiversity	Conservation Quality  Waste Management Input Management Soil Health Flora Diversity Flora Density Sequestration and	Water conservation measures  Access to safe water  Contamination  - Water contamination prevention measures  - Water discharge control  Farms recycling - reusing waste  Water contamination prevention measures  Amount of biocides used (synthetic & natural)  Toxicity clss of biocides used (synthetic & natural)  Use levels of synthetic and natural fertilizers for N, P, K use efficiency  Energy quality and use (gas, wood and other sources  Level of erosion on farms  Soil conservation measures  Local (closed) nutrient cycle of organic matter & crop processing left overs  Overstory biodiversity  Managed conservation areas  Overstory trees per hectare  Reforestation  Carbon Sequestration proxy: Overstory or Forest quantity/quality  Emissions proxy: Energy & Nitrogen calculation
